EDUCATION

Carnegie Mellon University

Aug. 2026 – Present

M.S. in Software Engineering | Part-Time Program for Working Professionals

University of California, Irvine

June 2026

B.S. in Computer Science; B.S. in Business Information Management

Intelligent Systems (AI) | GPA: 3.92

EXPERIENCE

Founder & Software Engineer, AI Products

Apr. 2026 – Present

Blux Inc. (AI4Science)

Irvine, CA

- Enabled agent-driven file management and Kanban workflows for Blux's biological-research platform by integrating Nextcloud MCP with ZeroClaw on NixOS, resolving dynamic-linker and systemd service-environment failures.
- Built a reproducible agent runtime with a dedicated service account and version-controlled identity, configuration, and persistent memory while isolating credentials and transient state.
- Fixed ZeroClaw's Nix installation by resolving stale hashes and Rust incompatibilities; added five regression tests and CI checks, merging [PR #10936](#) with two approvals to close [issue #5269](#).
- Integrated ZeroCode into ZeroClaw's declarative Nix package across build, test, and runtime dependencies; submitted [Nixpkgs PR #563820](#) and validated x86_64 and ARM64 Linux builds.

Software Engineer Intern

Jun. 2025 – Sep. 2025

Yahoo Finance

Mountain View, CA

- Built and deployed a user-facing LLM financial analyst using AWS Bedrock, Lambda, and SQS, enabling natural-language stock valuation and earnings analysis in under two seconds.
- Evaluated the AI analyst across the 30 largest public companies by market capitalization, performing error analysis on output correctness and achieving 68% agreement with professional analyst ratings.
- Evaluated agent tool selection and implemented fallback paths for failed MCP calls, preventing data-source failures from terminating multi-step valuation workflows.
- Built PostgreSQL and JSONB retrieval infrastructure for 6,500+ public companies; reduced third-party API usage by 40% and request latency by 200 ms through Redis caching and bulk data ingestion.
- Deployed event-driven inference services using FastAPI, Docker, Kubernetes (EKS), Terraform, Lambda, and SQS for asynchronous, long-running financial-analysis workflows.

Software Engineer Intern

Jan. 2024 – Mar. 2024

University of California, Irvine

Irvine, CA

- Led a team of three in building a distributed search system spanning web crawling, indexing, ranking, storage, and low-latency query serving.
- Architected an N-gram inverted index containing 1.88M MongoDB records, achieving sub-second search retrieval.
- Built a trap-aware crawler that indexed 370,000+ URLs across 55,000+ websites.

PROJECTS AND RESEARCH

Undergraduate Researcher

Sep. 2024 – Jun. 2026

University of California, Irvine

Irvine, CA

- Built and benchmarked C++/Python multi-agent planners using Conflict-Based Search and imitation learning, reducing total planning time complexity from exponential to linear across thousands of agents.

Fabflix.Life (Distributed E-Commerce Platform) [Demo] | *Node.js, Express.js, AWS, Kubernetes, MySQL*

- Built a distributed e-commerce platform with Node.js, Express.js, and MySQL, implementing REST APIs and secure transactional workflows.
- Increased throughput by 44% to 11,137 requests per minute in Apache JMeter load tests by deploying with Kubernetes (EKS), Elastic Load Balancing, and Auto Scaling.

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, C++, C, SQL, Shell/Bash

AI & Agents: LLM Agents, LLM/Agent Evaluation, Error Analysis, RAG, MCP, LangChain, AWS Bedrock

Backend & Data: FastAPI, Node.js, Express.js, REST APIs, PostgreSQL, MySQL, MongoDB, Redis

Cloud & Platform: AWS Lambda, SQS, EKS, Docker, Kubernetes, Terraform, Nix/NixOS, systemd
